1. Description of the article

capture.jpg, a photo record. Present custody: Scene of offence. Status on the ledger: Confirmed on the ledger.

2. Where this record is anchored

Network: Ledger not connected when this record was produced. Contract: EvidenceChain —. Registration transaction 0x44233af65040f4ef9813dba6788347cf4939013e76bbfd8b005f760835352453, block 101, confirmed 29.10.2026, 12:28:55 IST. Entries marked “Off chain” below exist only in NyaySetu's audit trail; entries with a transaction can be checked by anyone on a block explorer.

3. What each value means

File SHA-256: the fingerprint of the exact bytes of the evidence file. Capture manifest SHA-256: the fingerprint of the record made at capture (file fingerprint, device time, position fix, device), used when the item was captured live. On-chain committed digest: whichever of the two was written to the ledger. Transaction hash: the identifier of the ledger transaction that wrote it. They are four different values and are not interchangeable. A matching fingerprint shows the bytes are unchanged since registration; it does not show that what they depict is true, or that the evidence is admissible.

4. Transfers of custody (each acknowledged by the receiving party's re-check)

DATE AND TIME	FROM	TO	RECEIVED BY	LEDGER
29.10.2026, 12:28:55 IST	Registration	Scene of offence	Police officer	On chain 0x44233af650…35352453

5. Integrity checks

DATE AND TIME	RESULT	CHECKED BY	CONTEXT	LEDGER
No checks recorded				

6. Malkhana (property room) register

DATE AND TIME	MOVEMENT	LOCATION / SHELF	REASON	ENTRY DIGEST
29.10.2026, 12:28:55 IST	Deposited	Malkhana, Shivajinagar PS / R2-S4	Deposited after seizure	0xe8e02cf780…f86decb4

7. Seal readings by receiving parties

DATE AND TIME	SERIAL READ	RESULT	READ BY	CONTEXT
No seal bound to this item				

8. Gaps longer than 72 hours between recorded events

FROM	TO	LENGTH	BETWEEN
None — every interval is within the threshold
