Demonstration video — about 4½ minutes

Record at 1080p: the screen, plus the phone (a stand, or mirrored with `scrcpy`). Narrate in English with Marathi or Hindi on screen where relevant. Every shot is a real screen of the live system, not a slide.

Before recording

1. Fill the live system with a complete record: `FLOW_BASE_URL=https://nyaysetu-project.vercel.app npm run demo:data -- <admin-email> <admin-password>` (requires `backend/.env` pointing at the production database; add `--mail you@example.com` to receive the sign-in codes for the created roles).
2. Keep `docs/demo-kit/exhibit-original.png` and `exhibit-altered.png` at hand.
3. A second browser profile (or private window) for the public checks.
4. Phone on the same Wi-Fi, with the web app installed from the browser.
5. Fallback with no internet: `npm run local`.

Shot list

Time	Shot	Narration
0:00–0:20	Presenter on camera	"NyaySetu makes evidence, summons and bail in Maharashtra's criminal courts verifiable by anyone."
0:20–0:50	Home page, "Why now" section	"Since July 2024 every search must be recorded and every electronic record needs a hash certificate. But custody is still a register — it says an item moved, not that it is the same item."
0:50–1:20	Transparency → Tamper lab → sample → change one bit	"This is the whole idea. Change a single bit, and the fingerprint changes completely."
1:20–2:00	Phone: capture a photo; aeroplane mode, capture another; reconnect	"The fingerprint is computed on the phone before upload. Without signal it waits safely and syncs later — never twice." Show *Confirmed on chain* and the Etherscan link.
2:00–2:40	Private window: `/verify` → drop original (match), drop altered copy (no match); then "Use the file itself" with no reference	"No account. The defence, the court, the accused can check a file against the blockchain — not against the police database. They don't even need the reference."
2:40–3:05	Laboratory accepts with a different file → refused; Alerts page	"A mismatch is written to the ledger and an alert is raised. It can never be quietly fixed."
3:05–3:30	Accused portal in मराठी → Listen	"For the accused, obligations are explained in Marathi or Hindi and read aloud."

Time	Shot	Narration
3:30–3:50	Judge → Bail → Map	"The judge sees the geo-fence and every check-in. The contract decided each verdict."
3:50–4:10	Generate the §63 certificate; scan its QR with the phone	"The certificate is filled from the record, and its QR code lets anyone verify the paper itself."
4:10–4:30	Transparency page: counts, transactions, cost per record	"Live, measured, and public — with no personal data. Next: a pilot with one Pune police station. Thank you."
